

Cable mandrel

The TIBATEK cable mandrel is used to transport cable reels. In addition to being suitable for almost all excavators weighing 5 tons or more, its integrated forklift pockets also allow it to be picked up by wheel loaders and forklift trucks.

In combination with a rotator or tilt rotator, the cable mandrel is also ideal for laying cables.

A photograph of a blue TIBATEK cable mandrel attached to an excavator's arm. The mandrel is holding a large wooden cable reel with a black cable. The background is a solid blue color with a pinkish-red splatter effect on the right side. The text 'KABEL DORN' is written in a large, white, hand-drawn style font across the middle of the image.
